

Direction Eyelash Dye:

1.

Cleanse with Eyelash Cleanser or Hydrophilic Oil with Azulene and rinse with warm water.

2.

Protect skin with Skin Protection Cream or Vaseline.

3.

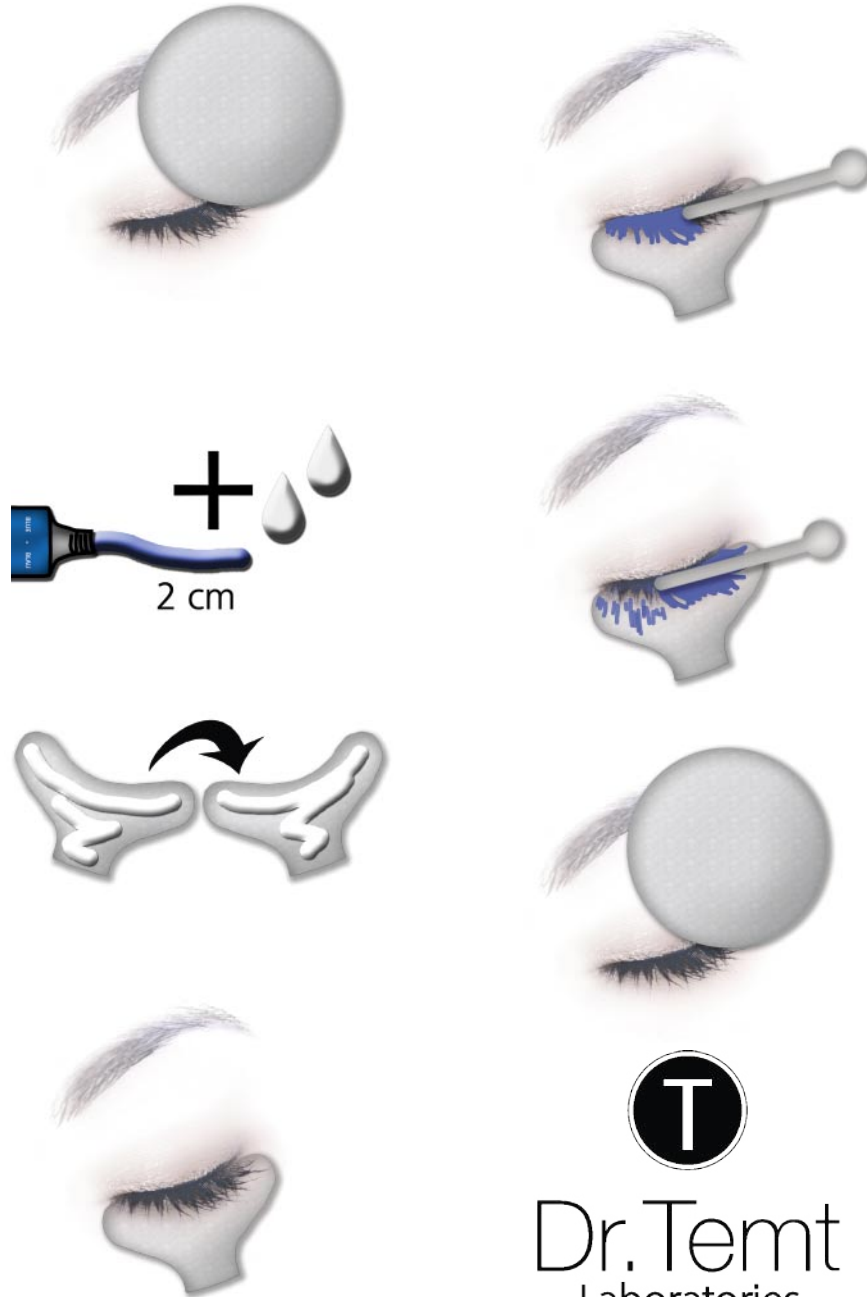

Mix 2 cm (0.08 inches) Dye with 2 drops of 10% hydrogen peroxide to get the ideal consistency of the color and to avoid skin irritations.

4.

To have the best skin protection, take 2 Eyelash Pads and apply a thin layer of Skin Protection Cream on each side of pads and put them together.

5.

Now carefully apply the eye-pads below the eye (lower eye lid) and start with the tinting process.

6.

The mixture is applied with a brush or with a wooden toothpick to brows and eyelashes, and left 5 – 10 minutes (the longer the time, the more intensive the color).

7.

You can remove the tint by pushing the tint onto the pads with a flat wooden toothpick. Remove all surplus color from lashes, brows and surrounding skin with cotton pads soaked in cold water.

8.

Use Color Cleanser to remove tint spots on skin and on garments.

- Make an allergic test.
- Avoid direct contact with the eyes. In case of contact with eyes, please rinse immediately with cold water.
- Contains Hydrogen Peroxide, please protect hands by wearing suitable gloves.
- Keep away from children.
